Trademate - Network Firewall Rule Release and Platform Migration to On-Premises Environment in B3 Data Center.

Aimed at segment participants: Counter

Summary: New IP addresses and connection ports have been added to the Trademate platform's certification and production environments.

Please be advised that new IP addresses and connection ports have been added to the Trademate platform's certification and production environments. They will be used for internet access to the system, hosted in B3's data center. Thus, it is imperative that these IPs are properly released in the firewall rules of the participants' network.

The initiative will ensure greater physical proximity to B3's central trading systems and Co-Location participants, which will offer the opportunity for lower latencies and greater agility in the execution of operations.

The full list of IPs and ports can be found at Trademate – FIX Connectivity | B3. The migration date in the certification and production environments, in turn, will be announced in due course. For more information, please contact our call centers.
